PROFESSIONAL SUMMARY

Computer Science student (GPA 3.91, graduating Spring 2027) and grant-funded AI researcher with 2.5 years of technical recruiting and client-facing consulting experience, 2 years of Python work, and 1 year of hands-on data science work. Brings Python, Pandas, and machine learning models including clustering, regression, and ARIMA to forward-deployed marketing data science, with a track record of presenting technical insights to non-technical executives and building AI tools that translate unstructured data into actionable outcomes.

CORE COMPETENCIES

Python & Pandas EDA

Machine Learning Models

Clustering, Regression, ARIMA

Customer-Facing Data Science

Jupyter & matplotlib

Stakeholder Communication

EDUCATION

Bachelor of Science, Computer Science | Florida Atlantic University

Expected Spring 2027

Boca Raton, FL | GPA: 3.91

Bachelor of Arts, Political Science | University of Florida

Graduated Fall 2021

Gainesville, FL

PROJECTS

AI for Enhancing Child Welfare

FAU Research

Serving on a multidisciplinary, grant-funded team developing a human-centered generative AI assistant to translate unstructured child welfare research articles, papers, and dissertations into actionable, transparent insights. Co-authoring the team's inaugural publication at the intersection of data science, AI, and social work.

Python | AI/LLM | Data Analysis | Publication

MonoSpace Studio - ASCII Art Generator

Live Product

Built and deployed a full-stack application at monospacestudio.netlify.app that uses LLM integration to generate ASCII art from user prompts. Developed with AI-native tooling: Devin, Antigravity CLI, MCP servers, and Supabase for backend, auth, and data.

LLM Integration | Supabase | Full-Stack Deployment | Prompt Engineering

All of Us Research Program - Data Engineering Hackathon

FAU

Competed on a team of 5 in an FAU-sponsored hackathon using the NIH All of Us Research Program dataset. Visualized feature importance in predicting Sickle Cell Trait (SCT) risk across demographic factors and presented findings to a panel of experts and local executives in Precision Medicine.

Python | Pandas | matplotlib | Jupyter | Feature Importance

AI for Cybersecurity Bootcamp

FAU

Completed an intensive bootcamp covering OpenAI APIs, HuggingFace, LLMs, RAG pipelines, LangChain, and AI security.

OpenAI API | RAG | LangChain | HuggingFace

WORK EXPERIENCE

Gravity IT Resources

Jan 2022 - Jun 2024

Senior Technical Recruiter | Fort Lauderdale, FL

- Consulted with IT managers, directors, and C-suite via Microsoft Teams to assess project needs and define technical requirements; interviewed candidates from senior engineer to principal architect level
- One of two members on the company's AI enablement team; collaborated with senior leadership on AI innovation initiatives and trained recruiters on AI-assisted workflows
- Created written and video documentation for internal training and knowledge management

- Led end-to-end recruitment for technical roles across software development, data, packaged software, infrastructure, and security, with expertise in cloud migration and modernization (Azure, AWS, GCP)

SKILLS

Languages: Python, C++, SQL **Data / ML:** Pandas, NumPy, SciPy, statsmodels, Seaborn, matplotlib, Jupyter, clustering, regression, ARIMA

Databases: Postgres, Azure SQL, MySQL, Supabase **DevOps / Tools:** Git, GitHub, GitHub Actions, Devin, Antigravity CLI, MCP servers

AI / LLM: Large Language Models, RAG, LangChain, OpenAI API, HuggingFace, prompt engineering

OS: Windows (10, 11), Linux (Ubuntu, Red Hat)
